Index

abacus, 269–271
ability: as basis for formation of instructional groups, 207; role of in school success, 298–299
academic achievement: affected by school organization, 446–454
academic performance: influenced by attitudes, 24–25; influenced by beliefs, 25–27; influenced by self system, 28–29
achievement tests: role of in formation of instructional groups, 208
activity structure of classrooms, 242–246
ACT* theory, 102–108
adult literacy education: attrition from programs for, 73; and competency-based education, 80; cost-benefit assessment of, 75; domain-specific knowledge in, 74; generalizability of, 74; historical context of research on, 62–66; history of, 86–90; objectives of, 72; overview of system of, 61; parent-child programs for, 82; research directions in, 85; research related to, 76–80; theoretical questions in, 78–79; use of management information systems in, 81; volunteers in, 62
Advanced Placement Tests (APT), 310–311, 318–319
aggregation bias, 430–431, 469
American College Testing Program (ACT), 310–311
antismoking programs, 173
anxiety, 24
aptitude-by-treatment interactions, 426, 432
apprenticeship: as a period of skill acquisition, 98; as a style of teaching the basics, 36
apprenticeship training, 97–163
Armed Services Vocational Aptitude Battery, 68, 79, 82
Association for Community Based Education, 61
Association for Supervision and Curriculum Development, 6
attitudes: effect of on performance, 21–25

base-free measures of change, 382
behavior change plan, 180–181
behavior change, theory of, 172
beliefs, effect of on performance, 25–27
between-wave scatterplot: use for multiwave data, 355–358; use for two-wave data, 352, 353–355
biology, student achievement in, 315–316, 318
Black English Vernacular, 267–268
BRIDGE (computer tutorial program), 111–112

calculators, use in mathematics and science classes, 332
cardiovascular diseases, 177
Catholic schools, 446–454
chemistry, achievement in, 319
class size, 427–428
cognitive models: for apprenticeship training, 98; to make tacit knowledge explicit, 162; utility of computer simulation for, 99
cognitive psychology, 256–257
compass rose, 271–273
competency-based adult education, 80
competition, effect of on group learning, 231–233
computer simulation, 99
computers, use in mathematics and science classes, 332
computer tutor, compared with human tutor, 108
computer tutoring systems: BRIDGE, 111–112; IMTS, 133–137; LISP, 102–110; PROUST, 110–111; QUEST, 152–160; SCHOLAR, 123; Sherlock, 140–152; SOCBI, 138–140; STEAMER, 127; TASK, 116; WHY, 123
construct validity, 351–352
cooperative learning methods: benefits of, 225; cognitive processes in, 237–240; compared with other instructional methods, 240–242; described, 227; effect on achievement, 327; mediating processes in, 233–235; peer interaction in, 235–237; reward structures in, 227; types of, 227–231
cooperative learning research, 204–205, 213–214
critical thinking, 22
cross-cultural research: on adult literacy education, 77–78; on mathematics, 253–300
cultural tools, 259, 261–273

Darwinian evolutionary theory, 254
device knowledge: importance of, 101; training based on, 120–163; in troubleshooting tasks, 112–120
Dewey, 4
difference score: failings of, 385; improvements to, 378–380; reliability of, 368–371; use in measuring individual change, 366–367, 384–385
digit memory, 260–261
dimensionality in classrooms, 244–245
disadvantaged students, 328–329
dissemination, 194–196
doctorates, trends in attainment of, 321–324
domain-independent teaching techniques, 13, 30–31
domain-specific knowledge: in adult literacy education, 74; and thinking ability, 13
dynamic consistency, 389
dynamic equilibrium, 377

educational assessment, 324–327
EM algorithm, 437
English as a second language, 59–75
ethnographic studies, 84
experts: higher-order thinking of, 17; knowledge of, compared with learning of novices, 159; organization of knowledge of, 13; performance of, 257; problem solving of, 17

fair-mindedness, 24
Fisher scoring method, 437
functional illiterates: defined, 59, 66–67, 71; influence of social networks on, 70; real-world functioning of, 69–71

generalizability: of literacy education, 74; of metacognitive skills, 160; of procedural rules, 110; of results, 191. *See also* transfer of training
goal of education, 34
goal setting, 174
grade level, effect of on instructional grouping, 208
Group-Investigation, 229–230

Head Start, 457–465
heterogeneity of regression, 431–433, 469
hierarchical linear model (HLM): application of, 437–454; explained, 433–436; use to study individual growth, 456–466
High School and Beyond (HS&B), 309–310, 311, 318, 447
high school equivalency, 72, 81
homogeneity of regression, 443

IEA studies, 290, 311–313, 319–320, 325
illiteracy, 66–67, 71
impulsivity/reflectivity, 22–23
IMTS tutoring system, 133–137
incentives (for healthful behavior), 172
individual growth. *See* measurement of change
individual growth trajectory: display of data for, 352–353; modeling of, 387–397; and multiwave data, 358–362; and two-wave data, 355
instructional effects research: computational approaches in, 436–437; examples of, 438–466; hierarchical linear models in, 433–436, 437–454; multilevel data needed for, 424–428; threats to validity in, 428–433; three-level model for, 466–469
instructional games, 180
instructional groups: advantages of, 203–204; appropriateness of, for kindergarten, 215–216; effects of, on achievement, 209–214, 328; formation of, 207–209; for reading, 210–211; research on, 204–207
intelligent tutoring system (ITS), 102, 123, 133
IQ tests, 12–13
Item Response Theory (IRT), 352, 378
iterative generalized least squares (IGLS), 437

Jigsaw, 229, 231

kindergarten, 215–216

language, influence of on mathematics learning, 260–261, 263–269
learned helplessness, 26
learning process, 35, 38
linear growth model, 458
LISP programming tutor: compared with other programs, 116–118; described, 102–108; evaluated, 108–109; strengths and limitations of, 109–110
literacy: effect of on economic competitiveness, 83; effect of practice on, 68–69; and productivity, 69, 79; in work settings, 67–68, 83–84
literacy development: in children, 65–66; in social contexts, 74
literacy helpers, 70, 74

literacy learning, adult/child differences in, 64–65
longitudinal research, 347

maintenance of gains, 176–177, 186
management information systems, 81
marginal maximum-likelihood estimation, 407
mass education, 7, 8
mastery learning, 328
mathematical reasoning: influenced by culture, 257–258, 283–285; outside school, 286–287
mathematics achievement: assessments of, 308–315; cross-national studies of, 313–314
mathematics achievement tests, 290
mathematics learning: cross-national studies of, 289–294; role of culture in, 258–260; in schools, 288–289
mathematics teaching: cross-national studies of, 294–297; improvement of, 331–335
mathematics use: by schooled people, 277–285; by unschooled people, 273–277, 281–285
measurement of change: data collection in, 350–352; displaying data from, 352–362; importance of, 346–348; by multiwave data, 397–412; by two-wave data, 362–384; within-subject and between-subject phases of 349, 384, 456, 466
mental discipline, 14, 16
misestimated precision, 429–430, 437, 469
Montessori curriculum, 216
motivation, 235, 243, 246
multilevel data: models for, 433–437; need for, 425–428; statistical inference in analysis of, 428–433; use in study of individual change, 454–466
multiwave individual growth data: advantages of, 351, 385; models of, 387–397; use of, 397–412

National Assessment of Educational Progress, 5, 68, 81–82, 308–309, 315–318, 325, 326
National Education Association, 4
National Longitudinal Study (NLS), 309–310
National Science Board Commission, 307, 331, 332, 334–335
nested, mixed model analysis, 429
nested research design, 429, 439
nonlinear individual growth, 359, 373, 390–391, 410
novices: organization of knowledge of, 13; problem solving of, 17

observed status, related to true status, 363
opportunity to learn, and achievement, 327, 330

peer influence, 234
peer tutoring, 232, 235, 236
physical science, achievement in, 316
Plato, 14
postindustrial society, educational needs of, 8
practice-centered training, 97
preconceptions, role of in learning, 35
primitive thought, 254–256, 273–277
procedures-based training, 101–120
process-product research, 204–205, 375
productivity: affected by literacy, 69; associated with literacy, 79
Progressive Education Association, 4
PROUST (cognitive diagnosis system), 110–111
psycholinguistics, 263
public schools, educational traditions in, 7
pupil/teacher ratio, 427–428

QUEST tutoring system, 152–160

race: differential mathematics achievement by, 309, 310; effects of cooperative learning techniques by, 213–214; role of in instructional groups, 207–208
race relations, and cooperative learning, 228
randomization, 187–190
reading disabilities, 297–298
reading potential, 65
reciprocal teaching, 36
reliability: of assessments of change, 461; of difference score, 367–371; of individual growth measure, 404–406; of measures, 364–366
residual change score, 380–384
reward, and achievement, 213
reward structures, 227, 231–233

scaffolding, 37, 39, 99, 163
Scholastic Aptitude Test (SAT), 310–311
school-based instruction: goal of, 97; and real-world situations, 98
science achievement: assessments of, 315–321; cross-national studies of, 320–321
science teaching, 331–335
self-concept, 228, 244
self-efficacy, 176–177

self-instruction, 23, 24, 108
self-monitoring, 173–174
self-regulatory skills, 173–176
self system, 28–29
Sherlock training system, 140–152
situated learning, 99, 106, 132, 145, 163
skilled performance: knowledge components of, 99; tacit knowledge in, 100. *See also* experts, novices
Small Group Teaching (SGT), 213
SOCBI tutoring system, 138–140
social-cognitive theory, and health behavior change, 172–173, 176
social-environmental modeling, 175
social pressure: on adolescents, 173; resistance skills for, 175
social status, and achievement, 212
socioeconomic status: effect of on academic achievement, 447–454; related to race and instructional grouping, 207
sociolinguistic research, 204–205
sociological research, on classroom grouping, 204–205
SOPHIE project, 126–127
standardized tests, and adult literacy education, 62–64
Stanford Adolescent Heart Health Project: description, 178–183; discussion of findings, 185–187; evaluation issues in, 187–194; results of, 183–185
STEAMER tutoring system, 127–132
strategic control knowledge, 100
strategic teaching, 36, 37
strong-sense critical thinking, 22
Student Team Learning, 230–231
Student Teams Achievement Division (STAD), 213, 230, 233, 242
systematic instructional practices, 240–243
systematic interindividual differences in growth, 371–376, 393–399, 406
system knowledge. *See* device knowledge

task ambiguity, 239
task structure: in cooperative learning methods, 228; effects of, 231–233; effects of changes in, 243
TASK tutoring program, 116, 136
teacher education: for health behavior intervention, 181–182, 195; improvements in, 331; in teaching of thinking, 37–38, 43
Teams-Games-Tournament (TGT), 213, 230, 233, 242
thinking ability: defined, 9–10; development of, as goal of education, 6; and domain-specific knowledge, 13, 30; effect of education on, 5–6
thinking, teaching of: approaches to, 29–34; and attitudinal variables, 21–25; and basic processes, 10–13; and beliefs, 25–27; current state of, 5; defined, 4; and domain-specific knowledge, 13–14; evaluation of, 40–43; and informal tools of thought, 17–19; and importance of motivation, 25; importance of student interaction in, 39–40; to improve instruction in schools, 332; and metacognitive knowledge, 19; need for, 8–9; and normative principles of reasoning, 14–17; recent interest in, 6; schools' resistance to, 7; in standard content courses, 31–33, 34; teachers for, 37–39
thinking strategies, training in use of, 238
Thorndike, 11
transfer of training: in good health practices, 172–173, 177; in thinking strategies, 11, 15–16, 18–19, 21, 30, 31, 34; in reading/reasoning strategies, 33. *See also* generalizibility
troubleshooting training, 112–120, 126–160
true status: as algebraic function of time, 388; related to observed status, 363
two-wave data, 454–456
two-wave study design: display of results from, 352–353; inadequate for good research, 350; use of difference score from, 366–371, 384–385

unit-of-analysis problem, 429, 431

validity, of self-reports, 186, 192
valid statistical inference, 428–433
video game, 153–154
vocational education movement, 98

War on Poverty, 61
weak-sense critical thinking, 22
whole-class instruction, 229, 240–241, 295
workplace literacy, 83–84
writing instruction, 438–446
